Abstracts

A safety light curtain sensor is an optoelectronic device designed to create an invisible protective screen or curtain of infrared light beams around hazardous machinery or automated equipment, primarily used to prevent operator injury by immediately halting machine operation when the beam is interrupted by an object or person entering the danger zone. These sensors consist of a transmitter and receiver pair that emit and detect multiple parallel light beams, forming a detection field capable of distinguishing between permissible interruptions (such as small parts) and those requiring a safety response, thereby ensuring compliance with international safety standards like ISO 13849 and IEC 61496 while enabling both personnel protection and operational efficiency in industrial environments such as manufacturing, packaging, and robotics.

The global Safety Light Curtain Sensor market size was estimated at USD 425.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
