Report Overview

Safety mat controllers are used to send and receive signals within a hazardous industrial area to make sure that neither workers nor machinery are injured or damaged. Safety mat controllers are connected to either a single safety mat, or a series of them. These mats, in turn, are laid out in a matrix as a boundary around a machine or robot. When any pressure is applied to a mat, be it from foot traffic or vehicles, conductive plates in the mat touch and signal are sent to the controller via an output relay.
