Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Safety Self-destructing Syringes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Safety Self-destructing Syringes will reach 4.40416 billion units, with an average selling price of US\$0.36 per unit. In the medical industry, disposable supplies are gaining increasing attention to prevent cross-infection. However, the currently widely used disposable syringes are managed for management purposes and lack the "disposable" characteristic. They can be reused, creating a risk of cross-infection. Furthermore, used syringes can easily puncture the philtrum of patients and doctors during subsequent handling, creating new opportunities for infection. Safety self-destructing syringes are safety syringes that are destroyed after one use and whose injection needles can be retracted into the syringe barrel. Their operation and performance are basically the same as those of existing disposable syringes, and they have a simple structure and are easy to produce and promote. According to the World Health Organization, unsafe injections lead to 8 to 16 million cases of HBV, 2 to 5 million cases of HCV, and 80,000 to 160,000 cases of HIV each year worldwide. Unsafe injections also lead to countless other infections, including acute infectious diseases like malaria, bacterial infections like abscesses, and microbial and other infections. These infections result in 1.3 million avoidable direct deaths and 26 million indirect lives lost, with direct medical costs for treatment and management reaching 4.3 billion RMB. Therefore, unsafe injections pose a significant threat to human health and well-being, placing a significant burden on healthcare systems and social costs. The serious harms of unsafe injections have garnered the attention of governments worldwide.

The global Safety Self-destructing Syringes market size was estimated at USD 1586.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
