Report Overview

Safflower extracts are derived from the flowers of the *Carthamus tinctorius* plant, primarily cultivated for their seeds and petals, which contain bioactive compounds such as flavonoids, polyphenols, and essential fatty acids. These extracts are widely used in the food and beverage, pharmaceutical, and cosmetic industries due to their antioxidant, anti-inflammatory, and skin-nourishing properties.

The global market for safflower extracts is driven by increasing demand for natural and plant-based ingredients in functional foods, dietary supplements, and personal care products. Growth is further supported by rising consumer awareness of health and wellness, along with the shift toward clean-label and organic formulations. However, challenges such as fluctuating raw material costs and limited cultivation regions may impact supply chain stability. Key producing countries include India, the U.S., Mexico, and China, with North America and Europe dominating consumption due to high demand for natural health products. Emerging markets in Asia-Pacific are expected to show significant growth, fueled by expanding applications in traditional medicine and beauty products. Competitive dynamics involve both established agro-processing firms and specialized natural extract manufacturers focusing on innovation in extraction techniques and product diversification. Regulatory support for herbal ingredients and sustainability initiatives in sourcing also influence market trends.

The global Safflower Extracts market size was estimated at USD 127.64 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
