Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SAG Balls competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. SAG balls are high-performance grinding media designed specifically for SAG mills, used in the coarse crushing and grinding stages of ores. Its core function is to crush large pieces of ore through high impact force, while also taking into account a certain grinding effect, gradually reducing the particle size of the ore from the initial size to a size suitable for subsequent fine grinding by the ball mill. SAG grinding balls need to adapt to high loads, strong impacts, and complex working conditions, and their performance directly affects the grinding efficiency, energy consumption, and equipment life of semi autogenous mills.

The global SAG Balls market size was estimated at USD 491.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
