Report Overview:

Sago is a type of starch that's commonly extracted from a palm called Metroxylon sago. It's mainly composed of carbs and is low in protein, fat, fiber, vitamins, and minerals. However, sago is naturally grain- and gluten-free, making it suitable for those following restricted diets. Sago starch is a multi-purpose product and therefore has a wide variety of usage from commercial to industrial purposes. For commercial purposes, sago starch can be used as the main ingredient of food products such as cookies, noodles, vermicelli, meatballs, dumplings, and other desserts. For industrial purposes, sago starch is considered to be one of the commodities which hold the highest yield in glucose extraction process compared to molasses and tapioca starch. Therefore, sago starch could be used by industries like textile, paper, food, and even medical purposes.
