Report Overview:

A catamaran is a multi-hulled watercraft featuring two parallel hulls of equal size. It is a geometry-stabilized craft, deriving its stability from its wide beam, rather than from a ballasted keel as with a monohull sailboat. Being ballast-free and therefore lighter than a monohull, catamarans often have a shallower draft (draught) than comparably-sized monohulls. The two hulls combined also often have a smaller hydrodynamic resistance than comparable monohulls, requiring less propulsive power from either sails or motors.

The Global Sailing Catamarans Market Size was estimated at USD 929.42 million in 2023 and is projected to reach USD 1333.39 million by 2029, exhibiting a CAGR of 6.20% during the forecast period.
