Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Saliva Substitute competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Saliva substitutes are oral moisturizers formulated as sprays, gels, rinses or lozenges to relieve xerostomia caused by aging, Sjögren's syndrome, cancer radiotherapy, polypharmacy and chronic diseases. In 2024, the global average unit price is approximately US\$11.2, with around 172 million units sold worldwide, generating a total market value of US\$1.93 billion. Gross margins typically range from 42%-58%, supported by specialized moisturizing polymers, glycerol systems, mucin-mimicking agents, biocompatible thickeners and medical-grade formulations. The supply chain includes upstream humectants, polymers, xylitol, enzymes and packaging materials; midstream manufacturers perform formulation, filling, sterilization and quality testing; downstream customers include pharmacies, oral-care clinics, cancer centers, hospitals, elderly-care facilities and e-commerce channels. Demand for saliva substitutes is rising as xerostomia becomes more prevalent among aging populations and patients undergoing polypharmacy or cancer radiotherapy. The shift toward long-acting gels, enzyme-enhanced formulas and sugar-free daily oral-care products is supporting premium pricing. Growing awareness of Sjögren's syndrome and increased accessibility through online pharmacies are expected to drive sustained market expansion through 2031.

The global Saliva Substitute market size was estimated at USD 1926.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
