### Report Overview

Salmeterol (also known as SEREVENT) is an adrenergic receptor agonist, which is mostly prescribed for the prevention and maintenance of asthma and chronic obstructive pulmonary disease. The drug has a 12-hour duration of action and thus is more beneficial than short-acting beta2- agonists.

The increase in prevalence of people suffering from asthma and COPD, low cost of the drug, and its ability in maintaining the symptoms for long duration of time is expected to increase the demand of the drug.
