Report Overview

Salmon Calcitonin Acetate is a biopharmaceutical product derived from salmon calcitonin, a hormone that plays a crucial role in regulating calcium levels in the body. It is primarily used for the treatment of osteoporosis, Paget's disease of bone, and hypercalcemia. The product is synthesized through a process of acetylation, which enhances its stability and bioavailability. Salmon Calcitonin Acetate is administered through injection and works by inhibiting osteoclast activity, thereby reducing bone resorption and increasing bone density. It is considered a potent therapeutic option for managing bone-related disorders due to its rapid onset of action and effectiveness in calcium regulation.
