### Report Overview:

A salt spray chamber is used to predict the degradation and decay of materials and surface coatings, with the help of which we can decide the lifespan of a particular product. Salt spray chamber uses an accelerated supply of salt spray which decides the rate of corrosion in the test specimen. The test duration of the products is completely dependent upon the corrosion resistance of that product. It may take from few hours to several days to complete the test.

This chamber is used to test the surfaces coated with electroplating, anode handling, paint, inorganic and organic films, anti-rust oil, etc. Many of the salt spray tests that are performed in these chambers mostly belong to a particular industry or sector depending upon the environmental corrosion effect. Salt spray chambers come in different sizes and are required to be compliant with various global standards such as ASTM, ISO etc.
