Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Samarium Iron Nitrogen (SmFeN) Magnetic Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Samarium Iron Nitrogen (SmFeN) Magnetic Materials production reached approximately 842 Tons, with an average global market price of around 62.74 USD per Kg. Samarium Iron Nitrogen (SmFeN) magnetic materials are a type of rare-earth permanent magnet made from an intermetallic compound of samarium (Sm) and iron (Fe), into which nitrogen (N) atoms are introduced. The interstitial nitrogen atoms expand the crystal lattice of Sm₂Fe, enhancing its magnetocrystalline anisotropy, coercivity, and magnetic energy product. The global Samarium Iron Nitrogen (SmFeN) Magnetic Materials industry is still in its early stages of development. Despite progress in technological research and development, there's still a gap before large-scale commercial application. In terms of market size, the current global SmFeN rare earth permanent magnet market is relatively small due to the lack of large-scale mass production. However, with the gradual breakthroughs in related technologies and the continuous expansion of application areas, the market size is showing a steady growth trend. Samarium Iron Nitrogen (SmFeN) Magnetic Materials' main components are samarium (Sm), iron (Fe), and nitrogen (N). Its core raw material is samarium oxide (Sm₂O₃), derived from rare earth minerals. China holds approximately 650,000 tons of samarium oxide reserves, ranking first globally. Currently, my country's annual samarium oxide production remains at around 4,000 tons. Its downstream applications primarily include consumer electronics, automotive, and robotics, with typical customers including Tesla, BYD, and Midea. Samarium Iron Nitrogen (SmFeN) Magnetic Materials' single-line production

capacity is in the early stages of ramp-up, ranging from 100 to 300 tons. Due to the initial stages of mass production, gross profit margins are typically low, typically 10% to 20%, due to equipment commissioning and process optimization. However, the extremely low price of its core raw material, samarium oxide, provides the foundation for achieving good gross profit margins for SmFeN magnets upon large-scale production.

The global Samarium Iron Nitrogen (SmFeN) Magnetic Materials market size was estimated at USD 52.84 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
