Abstracts

Samarium metal, a rare earth element with the atomic number 62, is a lustrous, silvery-white material known for its exceptional magnetic, thermal neutron absorption, and catalytic properties, primarily extracted from minerals such as monazite and bastnasite through complex ion-exchange and solvent extraction processes. It is critical in manufacturing permanent magnets (notably samarium-cobalt magnets), which offer high resistance to demagnetization and thermal stability, making them indispensable in aerospace, defense, and high-performance motor applications; additionally, it serves in nuclear reactor control rods due to its neutron-absorbing capabilities, in glass coloring and polishing agents, and in certain electronic and optical devices. The market for samarium metal is niche but strategically significant, driven by demand from high-tech and green energy sectors, though it faces challenges related to supply concentration, geopolitical factors influencing rare earth supply chains, and environmental concerns associated with mining and refining.

The global Samarium Metal (Sm Metals) market size was estimated at USD 98.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
