Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Same Floor Drainage Pipe System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Same Floor Drainage Pipe System reached approximately 1.2 million units, with an average market price of about USD 4,553. Same-floor drainage refers to the practice of ensuring that the drainage pipes (sewage laterals and water branches) within the bathroom do not penetrate the floor slab to enter other units. This method involves flat-surface installation within the same floor, ensuring that sewage and waste discharge meets or exceeds the standards of similar and other drainage methods, flowing smoothly into the main drainage pipe (main sewage riser). Any unclogging or cleaning requirements can be resolved within the same floor. This is referred to as "same-floor installation" or "same-floor drainage." In the supply chain, upstream suppliers include manufacturers of PVC-U, cast iron, copper pipes, and accessories like floor drains and siphon devices; midstream players are system integrators and equipment manufacturers such as RIFENG, Geberit, and Weixing; downstream customers encompass architectural design institutes, construction companies, real estate developers, and end-users. With the rise of green buildings and smart homes, the advantages of same-floor drainage systems in energy efficiency and user experience are increasingly recognized, leading to sustained market demand.

The global Same Floor Drainage Pipe System market size was estimated at USD 5464.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
