Report Overview

Sand making strips, also referred to as sandpaper strips or abrasive strips, are narrow, flexible strips coated with abrasive materials such as aluminum oxide, silicon carbide, or ceramic grains. They are primarily used in precision sanding, polishing, and finishing applications, particularly in woodworking, metalworking, and automotive refinishing. Their flexibility allows them to conform to contoured surfaces, making them ideal for intricate or hard-to-reach areas where traditional sanding tools are ineffective. Available in various grit sizes, sand making strips cater to different levels of material removal?from coarse grinding to fine finishing?enhancing surface smoothness and preparation for coatings or adhesives. Their durability, ease of use, and compatibility with manual or powered sanding tools contribute to their widespread adoption across industrial and DIY markets.
