### Report Overview:

Sandalwood is a class of woods from trees in the genus *Santalum*. The woods are heavy, yellow, and fine-grained, and unlike many other aromatic woods, they retain their fragrance for decades. Indian Sandalwood Oil (*Santalum Album*) is extracted from the woods for use. Sandalwood is the second most expensive wood in the world, after African blackwood. Both the wood and the oil produce a distinctive fragrance that has been highly valued for centuries. Consequently, species of these slow-growing trees have suffered over-harvesting in the past century.

The Global Sandalwood Extract Market Size was estimated at USD 119.34 million in 2023 and is projected to reach USD 145.00 million by 2029, exhibiting a CAGR of 3.30% during the forecast period.
