Abstracts

Sandblasted etched glass is a decorative glass surface treatment technique where a high-pressure stream of sand or other abrasive material is used to create a frosted or textured appearance on the glass. This process removes a thin layer of the glass surface to create a design, pattern, or text, giving the glass a unique and stylish look. Sandblasted etched glass can be used for a variety of applications, including windows, doors, partitions, and signage. It provides privacy while still allowing natural light to pass through, making it a popular choice for both residential and commercial spaces. Sandblasted glass is usually used to obscure the view but still transmit light. Sandblasted contemporary and traditional panels are extremely popular and repeat patterns are used when privacy or screening is required, many of the patterns we use are reproductions of Victorian originals, some patterns offer more privacy than others. Sandblasting offers a creative flexible solution for example if the glass is sandblasted both sides a multi-tonal effect is produced offering another dimension.

The global Sandblasted Etched Glass market size was estimated at USD 1480.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
