Report Overview

Sandwich structures can be classed as composite materials in that they consist of two or more individual components of differing properties which when combined result in a high performance material. In contrast to monolithic composites - which consist of an intimate mixture of fibres (glass, kevlar, carbon, metal, etc) supported within a continuous matrix (e.g. thermoplastic or thermoset resin) - sandwich structures have a discrete structure in which a core material is bonded to, and faced with, a skin material.

The global Sandwich Structured Composite market size was estimated at USD 2850.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Sandwich Structured Composite market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
