Report Overview

Flange sanitary butterfly valve disc center of rotation (i.e., the center of the valve stem) is located in the centerline of the valve body and disc sealing surface cross-section. Its seat is made of synthetic rubber. When it is closed, the external sealing surface of the disc presses the synthetic rubber valve seat to make the valve seat produce elastic deformation and form the elastic force as the seal pressure ratio to ensure the sealing of the butterfly valve. Flanged butterfly valve is a vertical plate structure, and the stem is a one-piece metal seal valve. Seal for the flexible graphite plate and stainless steel composite structure, which is installed in the valve body. Disc sealing surface is stainless steel. The seal of the soft seal valve is made of nitrile rubber, which is installed on the butterfly plate.
