Abstracts

Successive Approximation Register ADC (SAR ADC) is a common analog-to-digital converter architecture. Its working principle is to perform step-by-step binary approximation through the internal capacitor array and comparator, compare the input analog voltage with the internal digital reference voltage, and approximate one bit at a time until the entire conversion is completed. SAR ADC has medium to high sampling rate, high resolution, low power consumption and good anti-interference ability, and is widely used in industrial control, communication equipment, consumer electronics, automotive electronics (such as vehicle-mounted sensor interface) and other fields.

The global SAR ADC market size was estimated at USD 2730.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
