SAR (Synthetic Aperture Radar) Imagery Service provides high-resolution radar-based satellite or airborne images of the Earth's surface, regardless of weather conditions or daylight availability. Unlike optical imagery, SAR uses microwave signals to penetrate clouds, fog, and even some vegetation, making it ideal for applications such as disaster monitoring, environmental assessment, military surveillance, and infrastructure monitoring. SAR imagery services process and analyze radar data to generate detailed maps, detect surface changes, and support industries like agriculture, defense, and natural resource management.

The global SAR Imagery market size was estimated at USD 855.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
