Abstracts

saRNA is a synthetic RNA that has the ability to self-replicate in host cells, resulting in increased expression of target proteins. Compared with non-self-replicating mRNA, it retains the advantages of mRNA vaccines, such as rapid development, modular design, and cell-free synthesis, and due to its self-replication characteristics, only a lower dose of RNA is required, which can reduce the burden of production. This feature makes it a promising tool for vaccine development and gene therapy.

The global saRNA Synthesis Service market size was estimated at USD 1269.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
