Abstracts

Satcom On The Move (SOTM) antennas are specialized communication systems designed to provide continuous, high-bandwidth satellite connectivity for moving platforms, including vehicles, vessels, aircraft, and unmanned systems, without requiring operational pauses for signal realignment. These antennas employ advanced technologies such as electronically steered arrays (ESAs), gyro-stabilized mechanical dishes, or hybrid designs to dynamically track satellites while compensating for motion, vibration, and changes in orientation. They operate across multiple frequency bands?including Ku-band, Ka-band, and increasingly Q/V-band?to support voice, video, and data transmission in challenging environments. Key performance characteristics include low profile form factors, rapid acquisition times, high pointing accuracy, resilience to environmental interference, and compliance with stringent size, weight, and power (SWaP) constraints, making them critical for military, government, emergency response, maritime, aviation, and land-mobile applications where reliable beyond-line-of-sight communication is essential.

The global Satcom On The Move Antenna market size was estimated at USD 1320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
