Abstracts

Satellite Broadcasting Services refer to the transmission of audio, video, and multimedia content from geostationary or high-altitude satellites directly to end-users' receivers, such as television dishes or set-top boxes. These services are widely used for Direct-to-Home (DTH) TV, radio broadcasting, and content distribution over large geographic regions, especially where terrestrial infrastructure is limited. The broadcasting signal is uplinked from a ground station to the satellite, which then downlinks it over a fixed coverage area. Due to their broad reach and reliability, satellite broadcasting remains essential for global media distribution, live event coverage, and rural connectivity.

The global Satellite Broadcasting Services market size was estimated at USD 7125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.80% during the forecast period.
