## Abstracts

Satellite communication network services refer to space communication systems built using Earth-orbiting satellites (including geostationary, low-orbit, and medium-orbit satellites). They provide voice, data, video, and other information transmission and network access services to users in diverse scenarios, including on the ground, at sea, and in the air. These services achieve global or regional coverage through wireless links between satellites and ground stations. They are independent of ground infrastructure, offer wide coverage, and are highly resilient to disasters. They are widely used in emergency communications, ocean navigation, aviation communications, internet access in remote areas, and data transmission for the Internet of Things.

The global Satellite Communication Network Service market size was estimated at USD 2310.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.10% during the forecast period.
