Abstracts

Satellite Internet Access Service is a global communications infrastructure built on low-orbit, medium-orbit or high-orbit satellite constellations. It uses satellites as relay nodes to achieve two-way data transmission between ground user terminals and the Internet, bringing remote areas, oceans, air and mobile scenarios that are difficult to cover with traditional terrestrial networks into the scope of high-speed Internet access. It supports diverse access needs from consumer-grade portable terminals to enterprise-level vehicle/ship-mounted equipment, and has technical advantages such as wide-area seamless coverage, rapid emergency deployment, and strong disaster resistance. Ultimately, it will form an "air-ground-integrated" communications system that complements the terrestrial 5G/fiber optic network.

The global Satellite Internet Access Service market size was estimated at USD 1735.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
