Satellite radiators mainly rely on the principle of thermal radiation to dissipate heat. In the vacuum environment of the universe, heat conduction and heat convection cannot be carried out effectively, so thermal radiation becomes the main way for satellites to dissipate heat. The radiator radiates waste heat into the external space in the form of infrared rays through the high infrared emissivity coating on its surface, thereby achieving a heat dissipation effect.

The global Satellite Radiator market size was estimated at USD 65.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Satellite Radiator market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
