Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SBR Latex for Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Styrene-butadiene rubber latex is a kind of polymer material, which has a wide range of applications in lithium battery negative electrode materials due to its excellent chemical resistance, fatigue resistance, aging resistance and other characteristics. In the process of negative electrode preparation, SBR latex can be used as a binder to bond the negative electrode material with the copper foil electrode to form a complete electrode structure. At the same time, SBR latex can also play the role of a thickener, which makes the electrode coated uniformly and well fixed, and improves the mechanical strength and stability of the electrode. In addition, in the charge/discharge cycle of lithium-ion batteries, the electrode will undergo volume changes, which can easily lead to problems such as cracking and peeling of the electrode. The styrene-butadiene rubber latex has good flexibility and toughness, which can alleviate the deformation of the electrode, reduce the occurrence of electrode cracking, peeling and other problems, and extend the service life of the battery.

Global Market Drivers

Booming EV demand: The rapid expansion of electric vehicles (EVs) globally is significantly boosting demand for lithium-ion batteries, thereby driving the SBR latex market.

Shift to water-based binders: Environmental and safety concerns are accelerating the transition from solvent-based PVDF to water-based systems like SBR/CMC.

Cost-effectiveness: Compared with PVDF, SBR latex is cheaper and easier to process.

High performance in LFP cells: With LFP gaining traction in EVs and energy storage systems, SBR latex is favored for its compatibility and performance.

Asia-Pacific dominance: Countries like China, South Korea, and Japan dominate battery manufacturing and account for the largest share of SBR latex consumption.

The global SBR Latex for Battery market size was estimated at USD 582.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
