Abstracts

Styrene-Butadiene-Styrene (SBS) is a type of thermoplastic elastomer that exhibits both rubber-like elasticity and thermoplastic properties. It is a block copolymer composed of styrene and butadiene, offering high strength, durability, and flexibility. SBS is widely used in applications requiring excellent performance under stress, including asphalt modification for paving and roofing, footwear, adhesives, and sealants. Due to its compatibility with various materials and resistance to temperature fluctuations, SBS is preferred in industries where mechanical strength and environmental resistance are critical. The material's ability to improve the quality and longevity of infrastructure projects has made it indispensable in construction and road paving sectors.

Market Overview of SBS The global SBS market is dominated by key players like LCY Chemical, Sinopec, and Kraton, with the top three manufacturers holding over 50% of the market share. The Asia-Pacific (APAC) region leads the global market, accounting for about 55% of the total consumption, driven by extensive infrastructure projects and high production capacities. Following APAC, the Middle East and Europe hold significant shares of over 40%. Non-oil-extended SBS is the largest product segment, representing approximately 65% of the market due to its superior properties and diverse applications. The largest end-use segment is footwear, followed by asphalt modification, highlighting the material's versatility and widespread demand across industries.

Trends in the SBS Market The SBS market is experiencing growth driven by increasing investment in infrastructure projects and rising demand for durable, high-performance materials. Government spending on highways, expressways, and rail transit is fueling demand for SBS in asphalt modification. The standardization of the waterproofing industry is also contributing to increased SBS usage. Meanwhile, the expansion of butadiene production capacity since 2015 has ensured a stable raw material supply, reducing market monopolization and intensifying competition. SBS consumption in footwear is supported by its flexibility, durability, and cost-effectiveness compared to

alternative materials. Looking ahead, innovations in SBS production, coupled with growing demand for high-performance materials in construction and footwear, are expected to sustain market growth in the coming years.

The global SBS market size was estimated at USD 4265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global SBS market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
