Report Overview

Scaffold-free 3D cell sheet technology is a cell culture method that does not require additional cell scaffolds, but uses special cell culture vessels or special systems such as hanging drops and microfluidics to enable cells to grow in a specific environment. Aggregate into clusters to form a 3D cell model with a complete spheroid structure. This technology can simulate the growth and differentiation of cells in the in vivo environment, and prevent the attachment of cells to the surface of the vessel, so as to better simulate the oxygen and nutrient gradient in the in vivo environment. Scaffold-free 3D cell sheet technology is widely used in various biological and medical research fields, such as drug screening, disease modeling, tissue engineering, etc.

The global Scaffold Free 3D Cell Sheet Technique market size was estimated at USD 125.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.85% during the forecast period.
