Report Overview

Scanning Acoustic Tomography (SAT), is an analyzed tool to analyze the material interface quality or behavior by means of different material characteristics in reflection speed and energy from ultrasound signals transmission. When contacting the bonding interface of different materials, part of the ultrasound signals will reflect back to the detector and part of the ultrasound signals will penetrate the bonding interface. When contacting air (voids), 100% of signals will be reflected to the detector to form the image with arrowed areas
