Abstracts

A school ID card system is a comprehensive solution designed to manage the identification, security, and administrative functions within educational institutions through the issuance of personalized identification cards to students, faculty, and staff. These systems typically include hardware such as card printers, scanners, and access control readers, as well as software for database management, photo capture, and card design. Modern systems often integrate with other campus technologies, including attendance tracking, library management, cashless payment for cafeteria and bookstore transactions, and secure entry to buildings or restricted areas. The cards themselves are usually embedded with technologies such as barcodes, magnetic stripes, RFID, or smart chips to enable automated data capture and multifunctional use. Beyond physical security, these systems support administrative efficiency by automating processes like enrollment verification, event access, and resource allocation, while also serving as a visual means of identity verification to foster a safer and more organized school environment.
