Abstracts

An optical frequency comb is simply a mode-locked laser that is frequency and phase locked. This optical frequency comb laser has strictly equal frequency intervals in the frequency domain, similar to the teeth of a comb, so it is called an optical frequency comb (Optical frequency comb), abbreviated as optical frequency comb or optical comb. Optical frequency comb is another major breakthrough in the field of laser technology after the advent of ultra-short pulse laser. Optical frequency combs are produced by "mode-locked lasers", a new type of laser light source with ultrashort pulses (on the order of femtoseconds). With the rapid development of optical communication technology, OFC has attracted more and more scholars' attention due to its wide application in optical arbitrary waveform generation, multi-wavelength ultrashort pulse generation and dense wavelength division multiplexing.

The global Scientific Research Optical Frequency Combs market size was estimated at USD 53.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
