### Report Overview

The scintillator array is the core component of the scintillation detector. It is the conversion medium between high-energy rays and optical signals. It can convert high-energy rays (X-rays/ $\gamma$ -rays) or charged particles into ultraviolet light or visible light, and then pass through photomultiplier tubes, etc. Photon detection equipment converts optical signals into electrical signals, and finally presents the information of the interaction between high-energy rays and the detected matter in the form of digital signals.
