Report Overview

Scoring and cutting balloons are specialized medical devices used in angioplasty procedures to treat coronary artery disease. These balloons are equipped with small blades or scoring elements on their surface, which help in modifying and dilating the narrowed or blocked arteries more effectively than standard balloons. When inflated, these scoring or cutting elements create controlled incisions or scores in the arterial plaque, allowing for a more precise and efficient expansion of the artery. This process reduces the risk of arterial dissection and improves the outcomes of the angioplasty procedure, ensuring better blood flow and reducing the likelihood of restenosis.
