In 2024, global Scotch Marine Boiler production reached approximately 4,119 units, with an average global market price of around K US\$ 311 per unit. Scotch Marine Boiler is a traditional, compact fire-tube boiler design specifically engineered for marine applications?originally developed in the 19th century for steamships, though still used today in smaller vessels and industrial settings requiring reliable, space-efficient steam generation. Characterized by a cylindrical pressure vessel (the ?shell?) with multiple horizontal fire tubes running through its interior, the boiler operates on the fire-tube principle: hot combustion gases from a furnace (located at one end of the shell) pass through the fire tubes, transferring heat to the water surrounding the tubes in the shell.

The global Scotch Marine Boiler market size was estimated at USD 1283.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
