Abstracts

A scraper conveyor for mines is a specialized bulk material handling system used primarily in underground mining operations to transport extracted minerals, ores, or overburden materials over relatively short distances, typically within a single mining section or between mining faces and main transport systems. It consists of a trough-like structure through which a chain-driven scraper assembly moves, dragging material along the length of the conveyor. Key design features include high durability to withstand abrasive and heavy loads, resistance to harsh mining environments (such as moisture, dust, and impacts), and modular construction for ease of installation, maintenance, and relocation. These conveyors are valued for their efficiency in moving large volumes of material continuously, their ability to handle uneven or lumpy loads, and their adaptability to confined spaces and inclined paths, making them integral to productivity and safety in mining workflows by reducing manual handling and minimizing downtime.

The global Scraper Conveyor For Mine market size was estimated at USD 3250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
