Abstracts

To address the inconvenience of content display across multiple devices, the cumbersome nature of traditional wired connections, and the fragmented cross-platform collaboration experience, screen mirroring software has emerged. With the widespread adoption of wireless network technology and the growing demand for mobile office and cross-screen interaction, this type of software has continuously developed since the early 21st century, leveraging advancements in high-speed LAN transmission and encoding technologies, and driving the integration and innovation of device interconnection and remote collaboration. Currently, screen mirroring software has evolved into a comprehensive tool supporting real-time low-latency projection, cross-operating system interoperability, two-way interactive control, multi-screen parallel display, and cloud-synchronized management. It is widely used in scenarios such as business meetings, education, home entertainment, product demonstrations, and remote technical support, enabling efficient flow and immersive sharing of screen content, significantly improving collaborative efficiency and the integrated experience of cross-device operation. On the policy front, the EU's Digital Markets Act promotes open ecosystems like Apple's, while China's 14th Five-Year Plan for the Development of the Electronic Information Industry promotes domestic substitution and green transformation. Overall, screen mirroring software is evolving from a single projection tool to a full-chain intelligent platform. Technological integration and demand segmentation continue to reshape the market landscape, with the Asia-Pacific region and high-end markets in Europe and the US becoming the main growth drivers. Environmental policies and users' pursuit of high-quality visual experiences are propelling the industry towards deeper green and intelligent development.

The global Screen Mirroring Software market size was estimated at USD 368.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30%

during the forecast period.
