## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Screenblock Tape competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Screenblock Tape is a specialized type of tape used in screen printing to block out areas of the screen mesh where ink should not pass. It is applied to cover unwanted sections of the stencil or mesh, allowing printers to create precise designs and prevent ink from reaching specific areas. The tape is typically opaque and has an adhesive strong enough to stay in place during printing while still being removable without damaging the mesh. Screenblock Tape is commonly used for multi-color printing, repairing pinholes, or masking intricate patterns, ensuring clean, sharp prints and minimizing errors during production. The unit price of screenblock tape typically ranges from \$60 to \$120, with industry profit margins between approximately 20% and 30%. The supply chain for Screenblock Tape begins upstream with suppliers of base materials such as paper, polyester, or polyethylene films, along with adhesive resins and coating chemicals that provide strong, ink-blocking properties. Manufacturers process these inputs through coating, cutting, and rolling operations to produce finished tape in various widths and lengths. Downstream, the tape is distributed through printing supply wholesalers, equipment distributors, and online retailers to screen printing workshops, textile manufacturers, signage producers, and specialty print studios. End users apply screenblock tape for masking unwanted areas, repairing mesh defects, and creating precise multi-color designs, making it an essential consumable in the screen printing process for maintaining print quality and efficiency.

The global Screenblock Tape market size was estimated at USD 422.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the

forecast period.
