Abstracts

A screened separable connector is a specialized electrical component designed for medium to high-voltage applications, typically ranging from 5kV to 38kV, that enables safe and reliable connection and disconnection under load or fault conditions while providing electromagnetic shielding. These connectors feature a robust, insulated design with an integrated metallic screen or shield to contain electric fields, suppress partial discharges, and protect against external interference, ensuring operational safety and system integrity. Commonly used in power distribution networks, renewable energy installations, industrial plants, and railway systems, they allow for modularity, ease of maintenance, and enhanced personnel protection by permitting isolation of sections without de-energizing the entire network. Key variants include elbow connectors, tee connectors, and straight-through types, often complying with international standards such as IEC 60420 and IEEE 386.

The global Screened Separable Connector market size was estimated at USD 380.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
