## Abstracts

Screens for Laser Projector is a type of projection screen optimized for Laser Projectors, using special high contrast coatings and light-resistant materials to improve contrast, color saturation and brightness uniformity. Compared to traditional projection screens, laser screens are often characterized by Ambient Light Resistance (ALR), which maintains a clear image in bright environments while reducing light scattering and improving light efficiency. Its surface microstructure is designed to optimize the short or ultra-short throw (UST) projection effect of laser projection, reducing hot spots and color deviation for a sharper and more immersive image. Widely used in home theater, conference room, education and training, and high-end display scenarios, it provides a better viewing experience for laser projection.
