Abstracts

Screw air compressor is a kind of positive displacement compressor which realizes gas compression by rotating a pair of helical rotors (male rotor and female rotor) meshed with each other. Its core working principle is that the rotor rotates in the closed cavity, the volume between teeth changes periodically to complete the suction, compression and exhaust processes, and finally the mechanical energy is converted into the pressure energy of compressed air.

The global Screw Air Compressor market size was estimated at USD 1567.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
