Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Screw Air Conditioner Compressor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Screw Air Conditioner Compressor production reached approximately 2930 k units with an average global market price of around US\$ 360 per unit, a single-line production capacity of approximately 20,000 units/year, and a gross profit margin of approximately 10%-30%. Screw Air Conditioner Compressor is a type of positive displacement compressor commonly used in air conditioning systems, which employs two intermeshing helical rotors (male and female screws) to compress refrigerant gas. As the rotors rotate, refrigerant is trapped in the cavities formed between the rotor lobes and the compressor casing, gradually reducing in volume and increasing in pressure until it is discharged. The upstream segment involves the production and supply of key raw materials and components, including high-strength steel and aluminum for rotors and casings, precision bearings, copper tubing, electric motors, and lubricating oil, all of which directly affect compressor durability, efficiency, and noise levels. The midstream segment focuses on the design, engineering, and assembly of the screw compressors themselves, incorporating technologies such as oil injection, helical rotor optimization, and variable-speed drives to achieve smooth operation, energy efficiency, and reliable performance under varying load conditions. The downstream segment covers distribution, system integration, installation, and maintenance of these compressors in residential, commercial, and industrial air conditioning systems, including chillers and large HVAC units.

The global Screw Air Conditioner Compressor market size was estimated at USD 1055.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 3.40% during the forecast period.
