Abstracts

A screw decanter centrifuge is a specialized industrial separation device designed for continuous solid-liquid separation by leveraging high centrifugal force to separate mixtures with different densities. It features a rotating bowl and an internal scroll conveyor that rotates at a slightly different speed, allowing solids to be conveyed and discharged from one end while clarified liquid exits through the other. This equipment is widely used in wastewater treatment, food processing, chemical manufacturing, and mining industries due to its efficiency in handling high-volume, high-solids slurries, offering advantages such as automation capability, reduced moisture content in discharged solids, and consistent performance under demanding operational conditions.
