Report Overview

A Screw Flight Forming Machine is a specialized machine used to manufacture screw flights, which are the helical-shaped blades that are attached to the central shaft of a screw conveyor. These flights are responsible for moving materials along the length of the conveyor. The machine uses a process called cold rolling to form the flights from a continuous strip of metal. The strip is fed into the machine, where it is gradually formed into the desired helical shape. The machine can be adjusted to produce flights of different sizes and pitches, depending on the specific requirements of the screw conveyor.

The global Screw Flight Forming Machine market size was estimated at USD 60.30 million in 2023 and is projected to reach USD 75.31 million by 2032, exhibiting a CAGR of 2.50% during the forecast period.
