Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Screw Locking System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of screw locking systems is 160,100 units, with an average selling price of US\$10,000 per unit. A screw locking system is a device or integrated module used to automate screw tightening and is widely used in industrial assembly processes. The system utilizes components such as an electric or pneumatic actuator, a controller, a feeder, and a locking head to automatically feed, position, tighten, and inspect screws. Compared to manual operations, screw locking systems offer advantages such as high efficiency, high consistency, and strong traceability, making them particularly suitable for high-volume, multi-screw assembly. Modern systems often feature torque control, angle control, missed screw detection, and data logging to meet the needs of smart manufacturing and quality management. Leading companies such as Atlas Copco and Bosch Rexroth typically have an annual production capacity of approximately 20,000-50,000 units per year for handheld systems and 5,000-10,000 units per year for multi-axis systems.

The global Screw Locking System market size was estimated at USD 1601.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
