Abstracts

A screw thread comparator is a precision measurement instrument used to verify the geometric accuracy and tolerances of screw threads, typically by comparing a threaded part against a calibrated reference or master thread to detect deviations in pitch, angle, major and minor diameters, and thread form. It serves as a critical quality control tool in manufacturing, assembly, and maintenance processes where threaded fasteners?such as bolts, screws, and nuts?must conform to standardized specifications (e.g., ISO, ANSI, or DIN) to ensure proper fit, function, and safety in applications ranging from automotive and aerospace to machinery and consumer goods. The device may be mechanical, optical, or electronic in design, offering varying levels of precision, ease of use, and automation to accommodate different production volumes and accuracy requirements.
