Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SDS Loading Buffer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. SDS Sample Buffer is a sample pretreatment solution used in protein electrophoresis experiments. It is primarily used to denature, disaggregate, and impart a uniform negative charge to proteins during SDS-PAGE (sodium dodecyl sulfate-polyacrylamide gel electrophoresis). This buffer typically contains SDS (to denature and negatively charge proteins), glycerol (to increase sample density and facilitate sample loading), DTT or β -mercaptoethanol (reducing agents to break disulfide bonds), Tris buffer (to maintain pH), and bromophenol blue (tracing dye). Treating samples with this buffer ensures that proteins migrate according to their molecular weight during electrophoresis, enabling accurate separation and analysis. Sales volume in 2024 is expected to be 759,000 units, with an average price of US\$65 per unit.

The global SDS Loading Buffer market size was estimated at USD 49.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
