Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SDS-PAGE Operating Fluid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. SDS-PAGE Running Buffer is an electrophoresis buffer used in the protein separation stage of polyacrylamide gel electrophoresis. Its main function is to provide a stable pH environment and ionic strength, ensuring that proteins migrate in the electric field according to their molecular weight differences with a uniform negative charge density after SDS treatment. This buffer typically contains Tris, glycine, and SDS, which maintain constant conductivity and reduce heat accumulation, making the electrophoresis process stable and the bands clear. It is an indispensable basic reagent in protein analysis experiments. In 2024, sales reached 580,000 units, with an average price of \$145, a single-line production capacity of 50,000 units, and a gross profit margin of 75%.

The global SDS-PAGE Operating Fluid market size was estimated at USD 84.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
