## Abstracts

Sea buckthorn oil is derived from plants in a group of species of the genus Hippophae, the most commonly used of which is Hippophae rhamnoides. As species belonging to this genus accumulate lipids in the mesocarp (the fleshy part of the fruit), oil can be extracted from either the seeds or the pulp of the fruit. The resulting oils (seed oil and pulp oil, also often referred to as fruit/berry oil) are used in dietary supplements, nutraceuticals, cosmetics and skin care products. Sea buckthorn oil is a precious natural oil extracted from the fruit of the natural plant sea buckthorn. In addition to unsaturated fatty acids, sea buckthorn fruit also contains more than 100 biologically active substances such as flavonoids, vitamins, phytosterols, trace elements and  $\alpha$ -tocopherol. The oil content of sea buckthorn fruit is about 1.5%, of which pulp oil accounts for about 43% of the total, peel residue oil accounts for about 33%, and seed oil accounts for about 24%. In actual production, sea buckthorn oil is usually divided into sea buckthorn fruit oil and sea buckthorn seed oil. The palmitic acid content of sea buckthorn fruit oil is higher. According to the data of the "China Sea Buckthorn Resource Background Survey Report", there are sea buckthorn forests in about 51 countries around the world, mainly in Europe, Asia, America, Africa and other places. The total area of sea buckthorn forests in China is 19.1044 million mu, of which the area of artificial sea buckthorn forests reaches 10.5835 million mu, accounting for 55% of the total area of sea buckthorn forests in the country; China processes and utilizes 80,000 to 100,000 tons of sea buckthorn fruits annually, and the annual total output value of various sea buckthorn industries is 24 billion to 26 billion yuan.
